

The Best Start To Life.

Did you know?

Vaccination helps your child stay healthy, especially in the first few vulnerable years of life. The benefits of vaccination do not stop there.

Vaccination gives each child a **protective shield against vaccine-preventable diseases.**

Vaccinated children do not catch and spread these diseases, so they help shield others who might be susceptible, such as:

- classmates who are allergic to vaccines
- younger siblings too young to be vaccinated
- grandparents with weakened immune systems
- adults who have other chronic illnesses.

At Phoenix Medical Group, we would like your children to have the best start to life, and what better way, than to vaccinate them on time, without having to travel far from home!

We offer a complete experience, including updating the National Immunization Records, which you can access readily online.

We also carry a range of other vaccines like the influenza vaccine, Japanese Encephalitis vaccine etc.

PHOENIX MEDICAL CHILDREN'S VACCINATION PACKAGES

CHILD'S AGE	BASIC \$0*	ENHANCED \$299	COMPREHENSIVE \$699
